

MANI KARTHIK BOLLIMUNTHA

Senior Appian Developer | Appian Level 2 Certified | 7 Years Appian Experience

Herndon, VA • manikarthik@live.com • karthik07m.github.io/my_resume

PROFESSIONAL SUMMARY

Senior Appian Developer with 7+ years of experience designing and developing high-performance, scalable Appian applications for complex enterprise business use cases. Deep expertise across the full Appian development lifecycle — SAIL, Process Models, Expression Rules, Records, CDTs, and Connected Systems integrations. Proven ability to apply object-oriented design patterns, contribute to application performance analysis and system tuning, and deliver reusable solutions across multiple customers and verticals. Experienced in story breakdowns, acceptance criteria definition, code reviews, and troubleshooting emergent issues. Skilled in light full-stack development (React, Java, JavaScript) and mobile development (Flutter/Dart), with a track record of building enterprise-grade process automation solutions.

PROFESSIONAL EXPERIENCE

Senior Appian Developer • iLabs Inc, United States | January 2023 – Present

Client: USAC (Universal Service Administrative Co.) — Federal Compliance & Funding Platform

Designed and developed performant Appian applications addressing complex federal compliance business use cases, ensuring high usability and efficiency across Funding Form workflows.

- ▶ Applied Appian frameworks — SAIL, Process Models, Expression Rules, Records, and CDTs — across the full application development lifecycle, from database design to user experience.
- ▶ Developed and optimized MySQL stored procedures and data models for efficient multi-table validation, retrieval, and insertion, applying sound data structure and design patterns to ensure application stability.
- ▶ Contributed to application performance analysis and system tuning efforts, identifying and resolving bottlenecks across process execution and SAIL interface load times.
- ▶ Implemented REST integrations via Appian Connected Systems with USAC's internal validation APIs, building reusable and scalable integration patterns across the platform.
- ▶ Participated in story breakdowns, defined acceptance criteria, and supported technical feature design to align delivery with business requirements each sprint.
- ▶ Conducted comprehensive code reviews for peers, established code-review standards covering SAIL best practices, CDT reuse, and security role adherence — adopted as team-wide guidelines.
- ▶ Troubleshooting and resolving emergent application issues, implementing bug fixes and deploying features to higher environments to ensure consistent application functionality.
- ▶ Mentored 2 junior Appian developers on platform standards and review practices, improving overall team delivery consistency.

 **Participated in technical hiring interviews and defined Appian developer evaluation criteria, directly contributing to team growth.**

Appian Consultant • Yexle Limited, India | January 2021 – August 2021

Client: HSBC — Client Loan Onboarding & Risk Assessment Module | **Stack:** Appian 20.x / 21.x | REST APIs | AI Integration

- ▶ Successfully created and demonstrated a Proof of Concept for the Appian loan onboarding application to HSBC stakeholders, helping secure the project engagement.
- ▶ Designed and developed a scalable risk-assessment application using Appian Process Models with conditional branching logic, classifying applicants into low, medium, or high risk tiers — built to be reusable across onboarding scenarios.
- ▶ Integrated AI APIs into Appian via REST Connected Systems, demonstrating the platform's robust integration capabilities to enterprise clients.
- ▶ Troubleshooting and resolving application issues, managing deployments across Dev, SFT, and Pre-Prod environments and coordinating with multiple teams to ensure smooth transitions.

- ▶ Improved query performance of specific onboarding modules by ~25% through index optimization and reducing redundant query calls within Appian expression rules.

Appian Developer • Hexaware Technologies, India | November 2018 – January 2021

Client: IQVIA — Meeting Scheduler & Audit Log Platform (GDMPM Projects) | **Stack:** Appian 18.x / 19.x / 20.x | SQL Server | REST/SOAP

- ▶ Designed and developed a scalable meeting scheduler application featuring a task scheduler and audit log module, addressing complex cross-functional business use cases across GDMPM projects.
- ▶ Built complex Process Models with parallel approval gateways and conditional pathways, applying design patterns to automate scheduling logic, conflict detection, and participant notifications.
- ▶ Developed custom SAIL expression rules for dynamic date/time calculations and conflict resolution, and created administrative SAIL interfaces with role-based access controls and conditional rendering logic.
- ▶ Created SQL Server triggers and stored procedures to maintain comprehensive audit trails, supporting compliance requirements across scheduling activities.
- ▶ Conducted regular demonstrations with business analysts to validate requirements, gather feedback, and refine features throughout the delivery cycle.

 **Received a company award for developing an AI Chat integration within the Appian platform. Achieved first place in Hexaware's Full Stack Development Training.**

Associate Software Engineer • Hebeon Technologies, India | August 2017 – August 2018

- ▶ Designed and developed web applications using Java in an Agile environment, applying object-oriented programming concepts to build maintainable and scalable solutions.
- ▶ Developed RESTful and SOAP web services, wrote optimized SQL queries for MySQL databases, and implemented unit tests using JUnit to ensure application reliability.

Mobile Developer (Intern) • Web Synergies, India | June 2017 – July 2017

- ▶ Contributed to an e-commerce mobile application built using the Cordova framework, implementing product sorting by price and integrating payment gateways via third-party APIs.
- ▶ Proactively proposed novel application concepts and actively participated in their development alongside the core team.

SIDE PROJECTS

VISA SAGE — Mobile App (Google Play Store) |

play.google.com/store/apps/details?id=com.manikarthik.visasage | 2022

- ▶ Built a Flutter/Dart mobile app providing a comprehensive guide for US F1 visa processing requirements and procedures.
- ▶ Integrated Firebase for authentication and real-time updates.
- ▶ Achieved 1,000+ downloads with consistent maintenance and enhancements.

APPIAN VERSE — Appian Interview Practice Platform | appianverse.com

- ▶ Developed a full-stack web application for Appian interview practice using React (frontend), Supabase (backend & database), Vercel (hosting), and Cloudflare (domain & security) — built with AI assistance for accelerated development.
- ▶ Designed the application architecture to support scalable content delivery and user management, applying software design patterns for maintainability.

EDUCATION

M.S. in Computer Science | Cleveland State University | GPA: 3.4/4.0 | Aug 2021 – Dec 2022

B.Tech in Computer Science | UPES, India | Jun 2013 – May 2017

TECHNICAL SKILLS

Appian (v18–26): SAIL, Process Models, Expression Rules, Record Types, CDTs, Connected Systems, REST/SOAP Integrations, Decision Rules, Security (Groups/RBAC), Appian AI

Full-Stack & Mobile: React, Java, JavaScript, Dart/Flutter, RESTful & SOAP Web Services

Databases: MySQL (stored procedures, triggers, index optimization), SQL Server, Supabase | NoSQL (basic)

Cloud & Tools: AWS, Firebase, Vercel, Cloudflare, JIRA, Git

Certifications: Appian Level 2 Certified Developer
