## PROFESSIONAL EXPERIENCE

---

**Senior Lead Appian Developer • iLabs Inc, United States** | January 2023 – Present

**Client:** USAC (Universal Service Administrative Co.) — Federal Compliance & Funding Platform | **Stack:** Appian 23.x / 24.x / 25.x / 26.x | MySQL | AWS

- ▶ Developed and enhanced Funding Forms on a federal compliance platform, ensuring compliance with client specifications and requirements across compliance cycles.
- ▶ Created complex Process Model flows, designed user-friendly SAIL interfaces, and configured expression rules, records, and security settings within the Appian platform.
- ▶ Developed and optimized MySQL stored procedures for efficient data validation, retrieval, updating, and insertion across multiple tables.
- ▶ Created data models and SQL scripts, and implemented bug fixes to enhance application stability and performance.
- ▶ Implemented REST integrations via Appian Connected Systems with USAC's internal validation APIs, centralizing credential management and replacing ad-hoc HTTP calls.
- ▶ Established a formal code-review framework covering SAIL best practices, CDT reuse, expression-rule naming conventions, and security role adherence — adopted as the team standard across all user stories.
- ▶ Developed assigned user stories, conducted unit testing, and deployed features to higher environments to ensure application functionality.
- ▶ Conducted comprehensive code reviews for peers, ensuring high code quality and adherence to best practices.
- ▶ Mentored 2 junior Appian developers on platform standards and review practices, improving overall team delivery consistency.

**Participated in technical hiring interviews and defined Appian developer evaluation criteria, directly contributing to team growth.**

**Appian Consultant • Yexle Limited, India** | January 2021 – August 2021

**Client:** HSBC — Client Loan Onboarding & Risk Assessment Module | **Stack:** Appian 20.x / 21.x | REST APIs | AI Integration

- ▶ Successfully created and demonstrated a Proof of Concept for the Appian loan onboarding application to HSBC stakeholders, helping secure the project engagement.
- ▶ Designed risk-assessment Process Models with conditional branching logic that classified applicants into low, medium, or high risk tiers based on their responses.
- ▶ Integrated AI APIs seamlessly into Appian via REST Connected Systems to showcase its robust capabilities to clients.
- ▶ Resolved application bugs and managed deployments across Dev, SFT, and Pre-Prod environments, coordinating with multiple teams to ensure smooth transitions.
- ▶ Improved query performance of specific onboarding modules by ~25% through index optimization and reducing redundant query calls within Appian expression rules.

**Appian Developer • Hexaware Technologies, India** | November 2018 – January 2021

**Client:** IQVIA — Meeting Scheduler & Audit Log Platform (GDMPM Projects) | **Stack:** Appian 18.x / 19.x / 20.x | SQL Server | REST/SOAP

- ▶ Designed and implemented a meeting scheduler application featuring a task scheduler, where users can create meetings across GDMPM projects, and an audit log module to track all scheduling activities.
- ▶ Built complex Process Models with parallel approval gateways and conditional pathways, and implemented advanced decision rules to automate scheduling logic and participant notifications.

- ▶ Developed custom SAIL expression rules for dynamic date/time calculations and conflict resolution, and created administrative SAIL interfaces with role-based access controls and conditional rendering logic.
- ▶ Created SQL Server triggers and stored procedures to maintain comprehensive audit trails of all scheduling activities across GDMPPM projects.
- ▶ Conducted regular demonstrations with business analysts to validate requirements and gather feedback throughout the delivery cycle.

**Received a company award for developing an AI Chat integration within the Appian platform.**  
**Achieved first place in Hexaware's Full Stack Development Training.**

#### **Associate Software Engineer • Hebeon Technologies, India | August 2017 – August 2018**

- ▶ Worked in an Agile environment to design, develop, and maintain web applications using Java.
- ▶ Developed RESTful and SOAP web services, wrote SQL queries for MySQL databases, and implemented unit tests using JUnit.

#### **Mobile Developer (Intern) • Web Synergies, India | June 2017 – July 2017**

- ▶ Contributed to an e-commerce mobile application built using the Cordova framework, implementing product sorting by price and integrating payment gateways via third-party APIs.
- ▶ Proactively proposed novel application concepts and actively participated in their development alongside the core team.

## **SIDE PROJECTS**

---

#### **VISA SAGE — Mobile App (Google Play Store) |**

[play.google.com/store/apps/details?id=com.manikarthik.visasage](https://play.google.com/store/apps/details?id=com.manikarthik.visasage) | 2022

- ▶ Built a Flutter/Dart mobile app providing a comprehensive guide for US F1 visa processing requirements and procedures.
- ▶ Integrated Firebase for authentication and real-time updates.
- ▶ Achieved 1,000+ downloads with consistent maintenance and enhancements.

#### **APPIAN VERSE — Appian Interview Practice Platform | [appianverse.com](https://appianverse.com)**

- ▶ Developed a web application to help developers practice Appian interview questions, built using AI assistance for accelerated development.
- ▶ Built using React (frontend), Supabase (backend & database), Vercel (hosting), and Cloudflare (domain management & security).

#### **COINLY — Personal Finance App (Google Play Store) |**

[play.google.com/store/apps/details?id=com.budget.coinly](https://play.google.com/store/apps/details?id=com.budget.coinly) | 2026

- ▶ Built a Flutter/Dart Android app for tracking expenses, income and transfers across multiple accounts, with monthly category budgets and clear spending reports and analytics.
- ▶ Designed privacy-first: all financial data stays on the device and the core features need no account.

#### **DOTKIN — Desktop Focus Tracker (macOS / Windows / Linux) | [karthik07m.github.io/dotkin](https://karthik07m.github.io/dotkin) | 2026**

- ▶ Built a free, MIT-licensed desktop app with timed 10 to 45 minute focus blocks, a morning planner, and a floating desktop companion that shows time left and today's priorities.
- ▶ Added optional Claude-powered coaching that reads the user's own session log; all data lives in a single local file with no account, server or telemetry.
- ▶ Shipped as a self-contained HTML app in an Electron shell, installable on all three platforms.

## **EDUCATION**

---

**M.S. in Computer Science** | Cleveland State University | GPA: 3.4/4.0 | Aug 2021 – Dec 2022

**B.Tech in Computer Science** | UPES, India | Jun 2013 – May 2017

## **TECHNICAL SKILLS**

---

**Appian (v18–25):** Process Models, SAIL Interfaces, Record Types, CDTs, REST/SOAP Integrations, Connected Systems, Expression Rules, Decision Rules, Security (Groups/RBAC)

**Databases:** MySQL (stored procedures, triggers, index optimization), SQL Server | NoSQL (basic)

**Languages:** Java, SQL, JavaScript, Dart (Flutter)

**Tools / Cloud:** JIRA, Git, AWS, Firebase

**Certifications:** Appian Level 2 Certified Developer
